### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **DETAILED ACTION**

This communication is in response to amendment received on 1/30/08.

Claims 16 – 29 and 31 – 32 are presented for examination.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 16 – 29 and 31 – 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Becker (DE 3517114).

3. As to claims 16 – 29 and 31 – 32, Becker discloses an eddy current method for studying stress corrosion cracking in austenitic components comprising subjecting the component to a first eddy-current producing signal of a first frequency; determining a property of the base material responsive to the first signal having a depth of penetration including the base material; subjecting the component to a second eddy current producing signal of a second frequency, the first frequency lower than the second frequency; and determining a property of the degraded region responsive to the second signal having a depth of penetration including the degraded region, wherein the property of the degraded region comprises conductivity or permeability, wherein the base body and the degraded region do not contain ferromagnetic material (Note Abstract).

***Response to Arguments***

Applicant's arguments with respect to claims 16 – 29 and 31 – 32 have been considered but are moot in view of the new ground(s) of rejection.
